

A small, covert, extremely effective searching enhancement and officer safety/survival tool. Simplistic and easily operated, the FriskerPro has had a tremendous impact for both domestic and international agencies. The FriskerPro assist in various safety precautions, such as crime fighting measures, as well as, homeland security and anti-terrorism efforts for these agencies while deployed.

- Provides a 'free hand' approach allowing searches to be performed while still having the ability to use your entire hand if needed, for safety, using academy approved techniques.
- Rugged, water-resistant and all weather use
- Replaceable 9-volt battery with low battery indicator
- Reverse sensor for male searching female using 'back of hand' technique following approved search protocol
- Adjustable to fit any or either hand or both hands simultaneously, if wearing two
- Can detect objects as small as a staple in various locations on the body or within clothing.
- Point specific sensor

**Unlike anything on the market.**

**Rugged, ergonomic, fully adjustable, user friendly and sensitive enough to detect a hidden staple.**

- Negates false positives
